

CRICKSTATS

Cricket Player Performance Tracking Application

PROJECT REPORT

A Salesforce-based application developed to maintain player details and match-wise cricket performance records.

1. INTRODUCTION

CRICKSTATS is a Salesforce application developed to manage cricket player information and match performance details. The application brings player records, match statistics and performance analysis into one organized platform.

The project uses Salesforce custom objects, fields, relationships, roll-up summaries, flows, reports and dashboards. The main focus is to make player performance information easier to enter, maintain and view.

1.1 Project Purpose

- To maintain player information in a structured way.
- To record match-by-match performance details.
- To calculate important player statistics automatically.
- To display useful information through reports and dashboards.
- To reduce manual work in maintaining cricket records.

2. IDEATION PHASE

2.1 Problem Statement

- Player statistics may be maintained in different files, making it difficult to find complete information.
- Manual entry and calculation of statistics can take additional time.
- Coaches and team managers need an easier way to view player performance.
- Analysts need organized data for comparing player statistics and performance trends.

2.2 Target Users

- Team Managers
- Coaches
- Sports Analysts
- Salesforce Administrators

2.3 Brainstorming

- Web-based player management system
- Cricket statistics tracker
- Salesforce-based performance application
- Dashboard-based analytics
- Automated player statistics

Selected Idea

The selected idea is a Salesforce-based cricket player performance tracking application named CRICKSTATS.

3. REQUIREMENT ANALYSIS

3.1 Customer/User Journey

- Login to Salesforce application
- Open Player records
- Enter Match Performance details
- View calculated statistics
- Generate reports
- Analyze the dashboard

3.2 Functional Requirements

No.	Requirement
FR-1	Create and manage Player records
FR-2	Create and manage Match Performance records
FR-3	Calculate player statistics using roll-up summaries
FR-4	Display information through reports and dashboards
FR-5	Use Flow to display player information

3.3 Non-Functional Requirements

- Usability – simple navigation and easy-to-understand screens.
- Security – controlled access to application data.
- Reliability – accurate storage and calculation of records.
- Performance – quick loading of records and dashboards.
- Availability – access through the Salesforce cloud platform.
- Scalability – support for additional players and match records.

3.4 Data Flow

User → Salesforce UI → Player Object → Match Performance → Reports → Dashboard

3.5 Technology Stack

Layer	Technology
Frontend	Salesforce Lightning
Backend/Data	Salesforce Custom Objects
Automation	Salesforce Flow
Analytics	Salesforce Reports & Dashboards
Database	Salesforce Cloud

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The project addresses the difficulty of maintaining cricket player information and match statistics manually. CRICKSTATS organizes these details inside Salesforce so that records can be accessed and updated more easily. Roll-up summaries help calculate player totals from match performance records, while reports, dashboards and flows provide a convenient way to view the information.

4.2 Proposed Solution

- Player custom object
- Match Performance custom object
- Master-Detail relationship
- Roll-up Summary fields
- Lightning App
- Salesforce Flow
- Reports and Dashboards

4.3 Key Features

- Centralized player records
- Match-wise performance tracking
- Automatic total calculations
- Team-based player selection
- Player information displayed in a data table
- Dashboard-based analysis

4.4 Solution Architecture

Presentation Layer – Salesforce Lightning UI

Application Layer – Salesforce Flow and configuration

Data Layer – Player and Match Performance objects

Analytics Layer – Reports and Dashboards

5. PROJECT PLANNING & SCHEDULING

5.1 Development Plan

- Create Salesforce Developer Account
- Create Player object
- Create Match Performance object
- Create custom fields
- Create relationships
- Create roll-up summaries
- Create Flow
- Configure Home Page
- Add sample records
- Test reports and dashboard

5.2 Sprint-wise Work

Sprint	Main Work
--------	-----------

Sprint 1	Salesforce setup and object creation
Sprint 2	Tabs, Lightning App and custom fields
Sprint 3	Relationships, roll-up summaries and Flow
Sprint 4	Testing, reports, dashboard and final documentation

6. PROJECT DEVELOPMENT PHASE

The development phase focuses on creating the Salesforce objects, fields, relationships, roll-up summary fields and Flow required for CRICKSTATS.

Milestone 1 – Developer Account

Create the Salesforce Developer account and complete the initial account setup.

Milestone 2 – Object Creation

Create the Player and Match Performance custom objects.

Milestone 3 – Tabs

Create custom tabs for Players and Match Performances.

Milestone 4 – Lightning App

Create the CRICKSTATS Lightning App and add the required navigation items.

Milestone 5 – Fields & Relationships

Create the fields required to store player and match information and establish the relationship between Player and Match Performance.

- Player fields: Player Name, Player Number, Profile Picture, Date of Birth, Role, Batting Style, Bowling Style, Nationality and Team.
- Match fields: Match Result, Runs Scored, Balls Faced, Fours, Sixes, Overs Bowled, Wickets Taken, Runs Conceded, Maiden Overs, Stumpings and Catches.
- Player is the parent object and Match Performance is the related child record for roll-up calculations.

Milestone 6 – Roll-up Summary

Create summary fields on the Player object to calculate match count, total runs, fours, sixes, overs, wickets, stumpings and catches.

- Matches Played
- Number of 50's
- Number of 100's
- Total 4's
- Total 6's
- Total Runs
- Total Overs
- Total Wickets
- Total Stumpings
- Total Catches

Milestone 7 – Flow

Create a Screen Flow that allows the user to select a team and view the related player information.

- Team picklist on the screen
- Get Records for Player based on selected Team
- Data Table to display player details
- Add the Flow to the Home Page

1. Go to <https://developer.salesforce.com/signup>
2. On the sign up form, enter the following details :

Build enterprise-quality apps fast to bring your ideas to life

- Build apps fast with drag and drop tools
- Customize your data model with clicks
- Go further with Apex code
- Integrate with anything using powerful APIs
- Stay protected with enterprise-grade security
- Customize UI with clicks or any leading-edge web framework

Sign up for your Salesforce Developer Edition
A full-featured copy of the Platform, for free

Complete the form to start your free trial. Our team will be in touch to help you make the most of your trial.

First Name* Last Name*

Email*

Role*

Company*

- 1) First name & Last name
- 2) Email
- 3) Role : Developer
- 4) Company : College or Company Name
- 5) Country : India
- 6) Postal Code : pin code
- 7) Username : should be a combination of your name and company

This need not be an actual email id, you can give anything in that format :

username@organization.com

Click on sign me up after filling these.

Activity 2: Account Activation :

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.
2. Click on Verify Account.

3. Give a password and answer a security question and click on change password.

A screenshot of the "Change Your Password" form on the Salesforce platform. The form is titled "Change Your Password" and asks the user to "Enter a new password for lead@sb.oom." It lists requirements: "8 characters", "1 letter", and "1 number", each with a green checkmark. The form contains several input fields: "New Password" (with a "Good" strength indicator), "Confirm New Password" (with a "Match" indicator), a "Security Question" dropdown menu currently set to "In what city were you born?", and an "Answer" field containing the text "asdfghjkl". A blue "Change Password" button is at the bottom of the form, and the entire form area is enclosed in a red rectangular border.

4. Then you will redirect to your salesforce setup page.

Milestone 2 - Object Creation

Activity 1 : Player Object

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.

2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.

3. On the Object Manager page, click Create | Custom Object.

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
 - **Label** : Player
 - **Plural Label** : Players
 - Enter Record Name Label and Format
Record Name : Player Name
Data Type : Text
 - **In Optional features** : check the boxes for Allow Reports | Allow Activities | Track Field History.
 - **Search Status** : check the box for Allow Search.
 - Save
 -

Activity 2 : Match Performance Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
 - **Label** : Match Performance
 - **Plural Label** : Match Performances
 - Enter Record Name Label and Format
Record Name : Match Performance Name
Data Type : Text
 - **In Optional features** : check the boxes for Allow Reports | Allow Activities | Track Field History.
 - **Search Status** : check the box for Allow Search.
 - Save.

Milestone 3 - Tabs

Activity 1 : Custom tabs creation

1. Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab)
2. Select Object(Player) → Select the tab style → Next (Add to profiles page) keep it as default → Next (Add to Custom App) uncheck the include tab .
3. Make sure that the Append tab to users' existing personal customizations is checked.
4. Click save.
5. Repeat the same steps for Match Performances.

Milestone 4 - The Lightning App

Activity 1 : Create a lightning app

1. Go to setup page → search “app manager” in quick find → select “app manager” → click on New lightning App.

2. Fill the app name in app details and branding as follow
 App Name : CRICKSTATS
 Developer Name : Auto Populates
 Add image optional (if you want to give any image you can otherwise not mandatory) -
 Add Primary color Hex or leave it to default.
 Then click Next.
3. In App options
 Navigation style : Standard navigation
 Setup experience : setup
 Supporters form factors : Desktop and phone
 Then click Next
4. In Utility items
 Utility Bar alignment : Default
 Then click Next.
5. Navigation items
 Select the created Custom Objects and required standard objects
 - Players
 - Match Performances
 - Reports
 - Dashboards

Navigation Items

Choose the items to include in the app, and arrange the order in which they appear. Users can personalize the navigation to add or move items, but users can't remove or re-order navigation items available only for phone or only for desktop. These items are dropped from the navigation bar when the app is viewed in a format that the item doesn't support.

The screenshot shows the 'Navigation Items' configuration interface. It consists of two main panels: 'Available Items' on the left and 'Selected Items' on the right. The 'Available Items' panel has a search bar with the text 'Dash' and a list of items, with 'Dashboards' highlighted. The 'Selected Items' panel has a list of items: 'Players', 'Match Performances', and 'Reports'. A red box highlights the 'Selected Items' list. Below the panels is a 'Create' button. At the bottom right, there are 'Cancel' and 'Save' buttons, with the 'Save' button highlighted by a red box.

6. To Add User Profiles : System Administrator

The screenshot shows the 'New Lightning App' configuration interface for 'User Profiles'. It has a title 'User Profiles' and a subtitle 'Choose the user profiles that can access this app.' Below this are two panels: 'Available Profiles' on the left and 'Selected Profiles' on the right. The 'Available Profiles' panel has a search bar with the text 'System administrator' and a list of items, with 'System administrator' highlighted. The 'Selected Profiles' panel has a list of items: 'System Administrator'. A red box highlights the 'Selected Profiles' list. Below the panels is a 'Save & Finish' button, which is highlighted by a red box. A red arrow points from the 'System administrator' item in the 'Available Profiles' panel to the 'System Administrator' item in the 'Selected Profiles' panel. Another red arrow points from the 'Save & Finish' button to the right.

7. Click Save & Finish.

Milestone 5 : Fields & Relationships

Activity 1 : Create Custom fields for Player object

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. From the object manager page, In the Quick Find box, Search for the custom object you just created : **Player**
4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn't already exist.
6. Next, choose a data type as Text. Choosing a data type helps you format the field input.

7. Click on next.
8. Data Type : **Text**
Field Label: Player Name
Field Name : Auto Populates
Length : 50
Click on Next → Next → Save and new.
9. Repeat the Same steps for remaining fields

- Data Type : **Text**

Field Label: Player Number

Field Name : Auto Populates

Length : 3

Click on Next → Next → Save and new.

- Data Type : **Rich Text Area**

Field Label : Profile Picture

Field Name : Auto Populates

Click on Next → Next → Save and new.

Field Label : Player

Field Name : Auto Populates

Click on Next → Next → Save.

Milestone 6 : Roll-up Summary

Activity 1 : Create Roll-up Summary for Player object.

Note :- Roll-up Summary can only be created on parent object in Master- Detail Relationship.

1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.
3. From the object manager page, In the Quick Find box, Search for the custom object you just created : **Player**
4. From the sidebar, click Fields & Relationships. Notice that there are already some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick search to make sure a similar one doesn't already exist. Click Next,

6. Choose a data type as **Roll-up Summary**. Click Next.

Activity 2 : Flow on Home Page

1. On your CRICKSTATS Application on the top right of the Navigation Bar click on **Personalize your nav bar icon (Pencil Icon)** and Add Home Page and click Save.

2. Remove all other components and Add **FLOW** component from the standard components on the left side.
3. **Flow** : Players Flow

4. Click **Save** and **Activation**.
5. Click on **App Default** and select **Assign to Apps**.

6. Select **CRICKSTAS** App and Click **Next** and then click **Save**.

7. FUNCTIONAL & PERFORMANCE TESTING

During the testing phase, screenshots were captured from the Salesforce Lightning user interface to verify the correct functioning of all implemented features in the CRICKSTATS system. These include record creation for Player and Match Performance objects; validation rule checks for mandatory fields, score limits, and input constraints; verification of record type behavior for Domestic and International match categories; and flow execution for automatic updating of player statistics and data consistency. The functionality of roll-up summary fields was also tested to ensure accurate calculation of total runs, wickets, averages, and performance metrics.

In addition, system performance was evaluated by monitoring response time during data entry, report generation, and dashboard loading. The application was tested under multiple user interactions to ensure stable performance without delays. Screenshots of generated reports and interactive dashboards were documented to confirm accurate data visualization, real-time updates, and reliable performance tracking. These testing activities ensured that the CRICKSTATS platform met both functional and performance requirements and was ready for deployment.

NOTE : Enter some records in the Player Object and Match Performance Object to get the results.

1. Select one Team from the Picklist and Click **Next**.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Centralized system
- Real-time analytics
- Secure platform
- Scalable design
- Reduced manual work

Disadvantages

- Requires Salesforce license
- Internet dependency
- Limited offline access

9. Conclusion:

CRICKSTATS successfully implements a cloud-based cricket performance tracking system using Salesforce. The system automates data management, improves reporting accuracy, and supports informed decision-making. The project demonstrates practical application of SDLC, Agile methodology, and CRM-based development.

10. FUTURE SCOPE

- Mobile application integration
- AI-based performance prediction
- Video analysis integration
- Player ranking system
- Public statistics portal
- Multi-league support

11. APPENDIX

- Salesforce Objects & Fields
- Manual match statistics
- Flow Configurations

THANK YOU
